

Ivan Tsarynny, Chief Executive Officer, Feroot Security

Ivan Tsarynny is the co-founder and CEO of Feroot Security Inc., a cyber security company solely focused on security of online customer data. Its award-winning software analyzes and secures real-time behavior of code in the front end of websites and web applications, empowering companies to prevent breaches and data loss.

Under Ivan's guidance, Feroot has developed proprietary technology that detects third-party scripts and their level of access to mission critical data entered by users on the web, such as on registration and payment pages, as well as on website logins. Feroot partners with companies to detect and protect against these often-hidden scripts to secure customers' experiences, ensuring that users' confidential information is not harvested and used for malicious means.

25 years of dedication by Ivan earned him a reputation for thought leadership within industry, advisory councils for private sector, and government.

In March 2023, Feroot released a report outlining ByteDance's use of pixels and trackers to survey U.S. citizens. His report was featured in the *Wall Street Journal*, *Good Morning America*, *CNN*, *BBC*, *FOX*, and *Bloomberg* among many other publications. The findings of this report were cited in an *ABC News* article that was referenced by U.S. Senator Josh Hawley (R-Mo.) on the Senate floor.

Mr. Tsarynny has not previously testified before the Commission.
